

Toheeb Goodluck Ogunade

ogunadetoheeb4@gmail.com | linkedin.com/in/toheeb-ogunade | github.com/qeinstein

Technical Skills

Languages:	Go (Golang), Python, TypeScript, JavaScript (Node.js), SQL (PostgreSQL)
Backend & APIs:	Go Fiber, FastAPI, Express, RESTful APIs, JSON-RPC 2.0, Webhooks
Infrastructure:	Docker, Git/GitHub, Linux, CI/CD, Cloud Deployment
Competencies:	High-Concurrency Systems (CSP), Distributed Microservices, System Design, Relational Database Architecture

Experience

Backend Integration Engineer (Contract) Jul 2025 – Jan 2026

OysterSkin

- Architected and deployed production RESTful APIs managing critical data pipelines, reducing data extraction latency by 30% through targeted PostgreSQL schema optimization and query restructuring.
- Maintained high-availability cloud deployments using strict version control and automated CI/CD workflows, ensuring zero-downtime production updates.
- Designed and implemented JSON-RPC 2.0 integrations and webhook infrastructure for real-time third-party data governance.

Full-Stack Engineer May 2025 – Dec 2025

NITDA ICT Hub

- Built and shipped production-ready internal tooling using React and Node.js/Express across fast-paced sprint cycles, owning features end-to-end.
- Containerized RESTful microservices using Docker, reducing integration overhead by 25% and enforcing deployment determinism across CI/CD pipelines.
- Designed normalized PostgreSQL schemas supporting high-throughput read/write operations across distributed application layers.

API Engineering Intern Apr 2025 – May 2025

Curacel

- Engineered integration modules for high-volume, automated health data streams and complex third-party API endpoints.
- Collaborated with senior engineers to diagnose and refactor microservice architectures, measurably improving API response times.

Projects

Velarix — Decision-Integrity Engine for AI Agents | Go, Python, TypeScript https://github.com/qeinstein/velarix

- Architected a production-grade epistemic reasoning engine: symbolic Truth Maintenance System with OR-of-AND justification graphs, cycle detection at assertion time, and deterministic belief retraction — pure symbolic reasoning with no LLM in the hot path.
- Built a Postgres-backed HTTP API with JWT auth, governance controls, and integration surfaces for LangGraph, CrewAI, LlamaIndex, and OpenAI; shipped a Python SDK and v1x CLI.
- Engineered a fact-extraction sidecar (Delta) achieving p50 35.6 ms / p99 56.3 ms latency and 96.3% triple recall at zero LLM inference cost, using spaCy, coreferee, and GLiNER.

CausalDB — High-Performance State Engine | Go https://github.com/qeinstein/causaldb

- Architected a reactive backend engine demonstrating advanced mastery of Go's G-M-P scheduler, memory management, and pointer semantics.
- Implemented a Children Index using map[string]struct{} for O(1) dependency lookups and zero-memory-overhead set operations.
- Engineered deterministic re-entrancy guards and cycle detection, ensuring absolute system stability.

Rate Limiter Service | Python, FastAPI, Docker https://github.com/qeinstein/rate_limiter

- Built a production-grade FastAPI service implementing per-client token-bucket rate limiting with deterministic middleware behavior, latency measurement, and thread-safe metrics collection.
- Designed correct Starlette BaseHTTPMiddleware with post-response metrics and mandatory client header enforcement; full pytest coverage across middleware, rate limiting, and API contracts.

MCP Server — Autonomous Agent Infrastructure | Python, JSON-RPC 2.0

- Developed secure server infrastructure orchestrating autonomous tool-use and third-party API interactions over JSON-RPC 2.0, with fine-grained access control and custom routing adapters.

Education

University of Lagos	Lagos, Nigeria
B.Sc. Computer Science	Expected Jan 2028

Awards & Recognition

Winner, Best AI Innovation — Curacel Hackathon (2024)	8th Place — National Mathematics Olympiad (2023)
